

Writeup for TeamBudget:

This project is aimed to develop a web application where we can add the number of expenditures and their costs so as to get a final budget.

In the process, we have used the following :

1. First, we have downloaded and utilized Visual Studio Code to run the code
2. Then, using HTML and JavaScript, developed a code so that we can see those details on the display.
3. In order to meet the objective, we have used concepts like prototypes, IIFEs, async, primitives and webpack etc.
4. Finally, the code is run and output is displayed on the console and hence noted down for the future reference.
