

Writeup for RestaurantWebsite:

The main objective of this project is to develop websites for restaurants using bootstrap. In the process we have used the following.

1. First, I developed HTML code to define the content of the website like the food items available, address, brief description about the restaurant, address for communication etc.
2. Used bootstrap to build the website.
3. We have also used Javascript to handle responses and JQuery to include plugins
4. Finally, the output is printed on the screen and is noted down for future reference.
