

Writeup for UserLogInValidaion:

- 1.First, we created a servlet based web application
- 2.Then, we created 3 servlets which are login,logout,dashboard servlets and their codes were implemented accordingly.
- 3.Login servlet creates a login form and gives email and password.
- 4.The dashboard servlet will provide a link for logout.
- 5.Created a index.html file in which we managed the frontend part.
- 6.After creating all the required files, run the server.
- 7.Finally, the output is printed on the screen and noted for reference.
