

WriteUp for FlyAway:

We have tried to create a project named FlyAway and basically it is a flight ticket booking portal that lets folks book air tickets and MySQL database is created to store the details of flight time, cost, time, and passenger details.

In order to achieve the above mentioned target we have used the following:

1. Maven to create a web enabled project
2. Apache Tomcat as the web server
3. JSP for the front end
4. Servlets for backend processing
5. Hibernate to store data into the database.
