1. First, we need to create a package called fhh and class with name FileHandling
2. The, with the help pof craeteFilesUsingFileClass, I have created file named textjava.file and throws IOException.
3. Also, using fileWriter method, write text to the created file and also close the file using writer.close()
4. Using readFileReaderClass method, we red the data in textjava file and throws exception.
5. Output is printed and it is reflected in the file created.
6. Also, appended the file to the file using AppendToFile() method
7. Finally, with the help of main method, Called all the three methods and the output id dsplayed.
