Writeup for AddingNewProduct:

1. First, create a project with the name AddingProduct.
2. Then, we have to create com,bean package with product.java class and com.controller package with ProductStoreController servlet file and another com.dao package with ProductDao.java class and last another package with com.service with a ProductService.java class in it.
3. After that, we need to create two html files with names index.html and storeProduct.html. and a web.xml file and one hibernate file as well.
4. Also, we need to create a pom.xml file as well.
5. Save all these files and run as a project.
6. Output is printed on screen and the result is noted for reference.
